

YC-430 - FEATURES

Overview Specifications Brochure

The YC-430 multi-functional camera system: a new world of possibilities for your next presentation!

With the YC-430 multi-functional camera system, you can project anything that you can capture on camera — all without a PC.

The 10 megapixel camera with 3x optical zoom can be easily detached and used on its own. The whole system is wonderfully compact, measuring just 16.8 x 29.6 x 4.4 cm.

Automatic position correction

The software of the multifunctional camera system YC-430 recognizes distortions automatically and corrects them as if by magic. Even white balance is made completely automatically at the same time. So you always have right-angled pictures in the correct colours.

Flipchart/whiteboard function

Use the flipchart/whiteboard function to present and record diagrams and added notes. You can then send the handwritten whiteboard notes to all participants by email.

Live-Video mode

Record and project video clips using the live-video mode: ideal if you want to show how a device works or display a chemical experiment.

Document camera

Use the YC-430 as a document camera: just place your notes, photos or newspaper cuttings on the platen and off you go. You can even display 3D objects in this way.

Discover a new world of possibilities with the YC-430!

Giving presentations is now easier with CASIO's specially developed software — no need for a PC.
