

YW-2L - FEATURES

Overview

Specifications

**Even more easy - Stay mobile with the wireless WLAN connection**

Simple, quick and cable-free: YW-2L is an extremely small and handy WLAN adapter, creating a direct, wireless connection between the CASIO Projector XJ-S36 or XJ-S46 and a computer. It goes without saying that communication can also be established with all other CASIO Projectors in conjunction with the Presentation Kit YP-100. The major advantage is that the connection can take place without requiring any form of configuration on the PC. And thanks to the mini-format, the adapter can fit easily into any size of trouser pocket. Simply plug in and start.

**Simple connection:**

Simply plug the CASIO Wireless-Adapter YW-2L into the USB interfaces on the projector. The wireless transfer of your presentation can start straight away - that saves time. The WLAN connection complies with the IEEE802.11b-Standard.

**Show your team spirit: up to four WLAN users at the same time.**

Following the installation of the accompanying software, up to four Windows-PCs (Windows Vista®, XP® or 2000®) can access the projector without the use of cables. In this way, several presentations can be shown in a meeting from different PCs.
